

2010, March 2-6 at CeBIT

A New GPS Gadget Brought to You by LOCOSYS

A Wireless Bike Computer + GPS + MP3

Taiwan, CeBIT 2010, LOCOSYS, who has been digging in wireless and communication for many years, introduced you a new generation of GPS device for recreation applications! "BikePal" is a compact size wireless bike computer for self training and entertaining activities at the same time!

BikePal's multi-function comprises GPS data logger, geo-tagging, MP3/FM player, UV smart alert, heart rate monitor, barometer, and anti-burglary. It's much more than just a bike computer, people can find it more fun when riding a bike. With multi-sensor embedded, it will be more entertaining to go out. Visit our booth to see more attractive functions!

This product can be offered by LOCOSYS in different business models including ODM/OEM, PCBA level, and through all kinds of sales channels. Contact us immediately for more information!
